

## Joplin High School Joplin, MO

CGA and DLR Group's design for the new 475,000 SF high school serves 3,000 students in grades 9–12. The design incorporates the educational concept to prepare students for a "Career to College" experience. The center of the school, known as "Eagle Alley," is where this concept comes to life. The coffee shop, student store and lease spaces offer business opportunities for entrepreneurs.

Underclassmen will have the ability to peer into career pathways of interest in Technology, Broadcasting, Sciences, Hospitality, Culinary Arts, Automotive Sciences, Engineering, Medical and Construction. Joplin High School is designed to let a student experiment with a career pathway as in-depth as the student likes in a flexible, collaborative environment. Franklin Technology Center, the traditional career and technical center, is integrated into the curriculum as a career pathway delivery model. Technology is a seamless component of the building infrastructure and an asset to flexibility for teachers and students.

The school's landscape design provides a "park-like" setting for students and staff. Themed courtyards encourage students and teachers to use the site with places for outdoor experiments, studying, dining and socializing. The Commons is the social hub of the school and serves as the cafeteria and hospitality space for athletic activities and school functions.
